

## News Release

For Immediate Release

### MP Boissonnault Announces \$22 Million for Cleaner Energy Options in Alberta

December 15, 2017

Edmonton

Natural Resources Canada

Developing Canada's natural resources in more sustainable ways will drive our economy and create cleaner energy options in our transition to a low carbon economy.

Member of Parliament for Edmonton Centre, Randy Boissonnault today announced \$22 million for seven clean technology projects for the oil and gas and carbon, capture and use industries.

[Husky Oil](#), [Suncor Energy](#), [Proton Technologies](#), [Inventys Thermal Technologies](#), [Carbon Upcycling Technologies](#), [Quantiam Technologies](#) and [Carbon Engineering](#) will receive funding for projects focused on carbon capture and storage technology as well as reducing GHG emissions in the oil and gas sector. These innovative seven projects demonstrate the potential of clean technology and are making extraction and production, and use of our resources cleaner – helping create a future that might have once seemed impossible.

Three of the projects are funded through Natural Resource Canada's [Oil and Gas Clean Tech Program](#), which provides \$50 million over two years to support Canadian companies' development of clean oil and gas technologies. The other four projects are funded through NRCan's [Clean Energy Innovation Program](#), which provides companies with \$25 million over 2 years to accelerate clean technology development.

These programs are key components of the Government's approach to promoting economic growth while improving the sustainability of energy resources today during our transition to a low-carbon economy.

#### Quotes

"Canada's oil and gas sector will continue to innovate and improve its environmental performance. Developing and adopting clean technologies will help Canada meet its domestic and international commitments and will help maintain our natural resource advantage for years to come."
